## SNOW GEESE ARE COVID-FREE AND SAFE TO HUNT & EAT

Three research teams from Laval University assessed the risk of COVID-19 propagation

by snow geese

Geese were captured in spring 2020 during migration in southern Ouébec

Geese were tested for COVID-19 before continuing their migration to Nunavik and Nunavut

No COVID-19 virus was found in any of the 500 geese tested

This confirms snow geese are safe to hunt and eat!
